Fungible Token- items can be exchanged with one another with ease because their value isn't tied to their uniqueness. For example, you can exchange a $1 bill for another $1 bill, and you'll still have $1 even though your new bill has a different serial number.

Non-Fungible Token- items aren't interchangeable. With NFTs, each token has unique properties and isn't worth the same amount as other similar tokens. NFT’s are also tracked on a blockchain which can prove ownership and provenance. Royalty payments can also be built into a smart contract to ensure that the original artist receives royalties when their art changes ownership.

Why launch your NFTs on XPR Network?

- No gas fees! There are no gas fees for users to purchase NFTs on the XPR Network.
- Low fees to mint NFTs, with mint prices hovering around just a few cents and all prices marked in XUSDC.
- Instant transactions mean no wait times - so your buyers can own their new purchases immediately.
- Low barriers to entry. Buyers shouldn't have to pay $40-$200 in fees just to own an NFT. With XPR Network, your buyers pay fewer fees than anywhere else, meaning you take home more profit.
- Royalties! Earn passive income every time one of your creations is resold, without you needing to monitor future sales yourself.
